Hoorpendar

Hoorpendar Computer Technology Industries · Knowledge-based company · Est. 1999

We design and manufacture industrial electronics and deliver control, automation and instrumentation projects for oil and gas, water, power and heavy industry. We take each project from engineering study and design through commissioning and long-term support.

About us

Since 1999, Hoorpendar's engineers have worked in power electronics, control systems and industrial software. Every stage happens in-house, from circuit and firmware design to PCB assembly, factory acceptance testing and calibration. That is why most products can be built to a project's supply voltage, dimensions, output type and standard, and why equipment that has lost manufacturer support can be rebuilt or redesigned. The head office is in Tehran and the production workshop is in the Payam Airport Special Economic Zone.

years in industry	contracts completed	industrial clients	flame detectors in service

Capabilities

Excitation systems & governors

Thyristor static excitation systems with digital AVR for synchronous generators, excitation for synchronous motors, and digital hydro-turbine governors.

Gas turbine & burner equipment

Flame detectors, flame relays, high-energy ignition systems, fuel valve control, speed and temperature monitoring, and non-contact position sensors.

Alarm systems & process safety

Modular alarm annunciators to ISA-18.1, alarm panels, UV fire detection and high-integrity pressure protection systems (HIPPS).

Instrumentation & process monitoring

Pressure-to-current (P/I) converters, multi-channel process monitors, strain-gauge amplifiers, paperless recorders and data loggers.

Battery chargers & power supplies

Smart battery charger controllers, industrial and portable chargers, DC voltage stabilisers and custom power supplies.

Dams, power plants & infrastructure

Reservoir level measurement, dam safety instrumentation and deflection monitoring, gate position indication, master clock systems and frequency meters.

Legacy system retrofit & renewal

We inspect legacy cards and systems, capture their schematics, redesign them with components available today, then build, test and install them.

Turnkey project delivery

Engineering studies, system design, panel building, PLC and HMI programming, installation, commissioning, training and after-sales support.

Industries & facilities

Hydropower plants & dams · Thermal power plants · Refineries · Pumping & gas compressor stations · Offshore facilities · Petrochemicals · Steel · Rail · Mining · Water & wastewater

Firsts: Hoorpendar built Iran's first static generator excitation system and first digital hydro-turbine governor. The governor performed successfully in a black-start test.

Why Hoorpendar

- In-house design and manufacturing with full quality control
- Built to each project's technical specification
- Designed to standards such as IEEE 421 and ISA-18.1
- Fast spare-parts supply and long-term technical support
- Proven in harsh, high-temperature environments

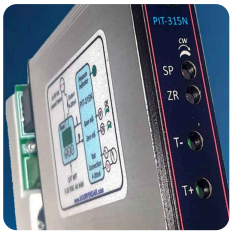

Featured products

Alarm annunciator

PAL750 · PAL625 · SAL-82

Modular and programmable, it handles 2 to 512 alarm points with ISA-18.1 sequences. It offers Modbus communication, first-out indication and high-brightness LED windows.

Pressure-to-current (P/I) converter

PI-315 · PIT-315N

Converts a 3–15 psi pneumatic signal to a 4–20 mA output, with zero and span adjustment and a pressure gauge. It suits upgrades of pneumatic instrumentation.

Gas turbine flame detector

FDU-300 · FDU-320 · FR-430E

Detects flame in gas turbines, boilers and burners with a UV sensor, and trips on flame loss. More than 200 units are in service.

Dam reservoir level meter

HP-LVLM100 · BLVM-100

Measures water level in dam reservoirs and canals with a digital float or an air-purge (bubbler) system, and sends it to the control room and data logger over analogue and digital outputs.

Also available: SECON-2000 static excitation system and DHTG-300 digital hydro-turbine governor · IGRU-200 high-energy ignition unit and 18 kV ignition exciters · SBC-600/620 smart battery charger controllers and SMART-128 charger · FMS-280 non-contact flare monitoring · MCI-870 8-channel process monitor · RUG-280 ramp generator and fuel valve control · STB-2408S voltage stabiliser · HIPPS · master clock systems and digital frequency meters.

Selected projects

- **Power** — Static excitation system for a hydropower generator, the first built in Iran
- **Water** — Fully redundant intelligent control of water flow from a dam into a metropolitan supply network
- **Oil & Gas** — Alarm annunciators covering 800 points for oil production units
- **Oil & Gas** — 120 PI-315 pressure-to-current converters for an instrumentation upgrade
- **Power** — Laser dam deflection monitoring with 0.01 mm resolution
- **Industry** — Traction generator excitation system for a diesel-electric locomotive
- **Power** — Digital hydro-turbine governor, proven in a black-start test
- **Oil & Gas** — Excitation control and starters for 3.5 MW synchronous motors at an oil pumping station
- **Oil & Gas** — Alarm annunciators and associated panels for 25 gas compressor stations
- **Oil & Gas** — Supply and commissioning of FDU-300 flame detectors for gas turbines at multiple sites
- **Power** — Reservoir level measurement and position indication for 11 dam gates up to 3 km away
- **Industry** — Data acquisition and switching network for meteorological centres, linking over 256 stations simultaneously
