Hoorpendar

Hoorpendar Computer Technology Industries · Knowledge-based company · Est. 1999

Hoorpendar designs and manufactures industrial electronic systems and delivers control, automation and instrumentation solutions for power generation, oil & gas, water and heavy industries. From engineering and system design to manufacturing, commissioning and long-term support, we provide integrated solutions tailored to demanding industrial environments.

Engineering
Studies, circuit, firmware & system design

Manufacturing
PCB assembly, testing, calibration & FAT

Retrofit
Modernization of obsolete electronic systems

System integration
Turnkey control & instrumentation projects

About us

Since 1999, Hoorpendar has been engineering and manufacturing industrial electronic and control systems for critical infrastructure and process industries, with expertise spanning power electronics, instrumentation, automation and industrial software. Our engineering and manufacturing capabilities are vertically integrated, covering electronic and firmware design, PCB assembly, testing, calibration and Factory Acceptance Testing (FAT). Our systems can therefore be engineered and customized to meet project-specific requirements, including supply voltage, mechanical dimensions, I/O configuration, communication interfaces and applicable standards.

25+	138	25	200+
years in industry	contracts completed	industrial clients	flame detectors deployed

Capabilities

Excitation systems & governors
Thyristor static excitation systems with digital AVR for synchronous generators, excitation for synchronous motors, and digital hydro-turbine governors.

Gas turbine & burner equipment
Flame detectors, flame relays, high-energy ignition systems, fuel valve control, speed and temperature monitoring, and non-contact position sensors.

Alarm systems & process safety
Modular alarm annunciators to ISA-18.1, alarm panels, UV fire detection and high-integrity pressure protection systems (HIPPS).

Instrumentation & process monitoring
Pressure-to-current (P/I) converters, multi-channel process monitors, strain-gauge amplifiers, paperless recorders and data loggers.

Battery chargers & power supplies
Smart battery charger controllers, industrial and portable chargers, DC voltage stabilisers and custom power supplies.

Dams, power plants & infrastructure
Reservoir level measurement, dam safety instrumentation and deflection monitoring, gate position indication, master clock systems and frequency meters.

Legacy system retrofit & modernization
We modernize obsolete industrial electronics by documenting legacy designs, redesigning circuits around current components, manufacturing replacement units and supporting site commissioning.

Turnkey project delivery
From engineering studies and system design to panel fabrication, PLC/HMI programming, installation, commissioning, operator training and long-term technical support.

Industries & facilities

Hydropower plants & dams · Thermal power plants · Refineries · Pumping & gas compressor stations · Offshore facilities · Petrochemicals · Steel · Rail · Mining · Water & wastewater

Why Hoorpendar

- Vertically integrated engineering and manufacturing
- Engineered to meet project-specific requirements
- Designed to standards such as IEEE 421 and ISA-18.1
- Responsive spare-parts and long-term technical support
- Proven in harsh, high-temperature environments

Firsts: Hoorpendar manufactured Iran's first static generator excitation system and first digital hydro-turbine governor, proven in a black-start test.

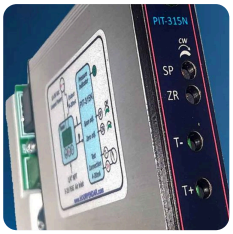

Featured products

Alarm annunciator

PAL750 · PAL625 · SAL-82

Modular and programmable, it supports 2 to 512 alarm points with ISA-18.1 sequences. It offers Modbus communication, first-out indication and high-brightness LED windows.

Pressure-to-current (P/I) converter

PI-315 · PIT-315N

Converts a 3–15 psi pneumatic signal to a 4–20 mA output, with zero and span adjustment and a pressure gauge. It suits upgrades of pneumatic instrumentation.

Gas turbine flame detector

FDU-300 · FDU-320 · FR-430E

Detects flame in gas turbines, boilers and burners with a UV sensor, and trips on flame loss. More than 200 units are in operation.

Dam reservoir level meter

HP-LVLM100 · BLVM-100

Measures water level in dam reservoirs and canals with a digital float or an air-purge (bubbler) system, and sends it to the control room and data logger over analogue and digital outputs.

Also available: SECON-2000 static excitation system and DHTG-300 digital hydro-turbine governor · IGRU-200 high-energy ignition unit and 18 kV ignition exciters · SBC-600/620 smart battery charger controllers and SMART-128 charger · FMS-280 non-contact flare monitoring · MCI-870 8-channel process monitor · RUG-280 ramp generator and fuel valve control · STB-2408S voltage stabiliser · HIPPS · master clock systems and digital frequency meters.

Selected projects

Power	Static excitation system for a hydropower generator, the first of its kind manufactured in Iran
Water	Fully redundant intelligent control of water flow from a dam into a metropolitan supply network
Oil & Gas	Alarm annunciators covering 800 points for oil production units
Oil & Gas	120 PI-315 pressure-to-current converters for an instrumentation upgrade
Power	Laser dam deflection monitoring with 0.01 mm resolution
Industry	Traction generator excitation system for a diesel-electric locomotive
Power	Digital hydro-turbine governor, proven in a black-start test
Oil & Gas	Excitation control and starters for 3.5 MW synchronous motors at an oil pumping station
Oil & Gas	Alarm annunciators and associated panels for 25 gas compressor stations
Oil & Gas	Supply and commissioning of FDU-300 flame detectors for gas turbines at multiple sites
Power	Reservoir level measurement and position indication for 11 dam gates up to 3 km away
Industry	Data acquisition and switching network for meteorological centres, linking over 256 stations simultaneously
